Side!Buddy—An Electronic *ACT!* Database Juggler (The perfect companion for *ACT! For Web*)

Open multiple *ACT!* databases simultaneously without losing your place in the primary database. Users can perform lookups, copy data between databases, close activities, and update note records. **A must** for those offices where *ACT!* data resides on multiple databases.

Side!Buddy (S!B) is an Internet-hosted application that provides users the ability to quickly switch between *ACT!* databases without losing their place on their primary database. Once connected to another database (selected from a dropdown menu), the user can do the following:

- ?? Lookup Contact/Group records by the first letter of the last name or company name.
- ?? Lookup Contact/Group records using the Advanced Search facility.
- ?? Copy 1 or multiple Contact records from one database to another.
- ?? View detail data of selected Contact or Group records.
- ?? Close Activity records.
- ?? Update Note records.

S!B will be invaluable to those in your organization who need to jump between databases looking for contact information. For instance, the phone rings. The call is from a contact that is in another *ACT!* database containing *Prospects*. With a single click the user can activate **S!B**, select the appropriate database, search for the contact, and then copy it (promote it to a Customer) to the current, active database. It is that simple!

The screenshot shows the Side!Buddy application window. At the top is the 'Side!Buddy Toolbar' with buttons for 'List', 'Detail', 'Search', 'Options', and 'Log Off'. Below the toolbar is a 'List View' table with columns for Contact, Company, City, and State. The table contains a list of contacts, with the first few rows highlighted in blue. Callouts point to various features: 'Browse List with column headings' points to the table headers; 'Select records starting with letters N-Z (or numeric)' points to the right side of the table; 'Select All or records starting with A-M' points to the left side of the table; 'Contact/Group tabs' points to the 'Contact' and 'Group' buttons at the bottom; and 'Select desired database' points to the 'Database' dropdown menu at the bottom, which is currently set to 'ACT6Demo [Connected As [chris huffman]]'.
